

PRANAV RAJESH CHARAKONDALA

Champaign, IL | +1 447 902 4780 | prc4@illinois.edu | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software engineer and AI practitioner, MS Information Management (UIUC, May 2026), with 2+ years of industry experience shipping production Salesforce platforms, medical AI systems, and automated workflows end to end, with a track record of automating complex business processes using Python, Apex, LWC, SOQL, Claude Code, and LLM APIs across healthcare, enterprise, and research environments.

PROFESSIONAL EXPERIENCE

CENTER FOR HEALTH INFORMATICS, UIUC | Champaign, IL

Lead AI Engineer | *Agentic AI & Health Informatics Platform Engineering*

May 2025 – May 2026

- Designed a **provider-agnostic LLM pipeline** for health misinformation detection, supporting Claude API, OpenAI, and Ollama through a runtime-checkable Protocol abstraction with tool-use pipelines and agentic workflows in production
- Instrumented an **eval, observability, and alerting framework** benchmarking multiple LLM providers across precision, recall, and F1 with YAML configs and confidence histograms, tracing execution IDs across microservices for end-to-end pipeline auditability
- Ran **continuous feedback loops and fine-tuning experiments** across 40+ runs iterating on model behavior and prompt configurations based on real-world eval signal, establishing output quality standards and data-driven provider selection for production AI workflows
- Shipped an **analyst-facing health AI platform** with a Next.js 14 frontend enabling WHO public health researchers to independently run AI workflows, translating complex model outputs into accessible insights for non-technical stakeholders

DELOITTE USI | Bangalore, India

Analyst – Software Engineer | *Financial Services Platform*

Jun 2022 – Jul 2024

- Implemented 50+ **custom Salesforce FSI Cloud features** using Apex and LWC, optimizing SOQL query performance by 20% and reducing page load latency to 2 seconds across a wealth management platform serving 12,000+ financial advisors
- Developed **real-time Salesforce workflows** using Apex, Flow, Visualforce, LWC, and Platform Events for the Interaction Notes feature, defining custom objects and validation rules across 12,000+ client branches and reducing data lag by 40%
- Refactored **legacy Apex logic across 20+ backend modules** and built reusable Salesforce REST API integrations, modularizing business rules to cut tech debt and improve long-term maintainability across the platform
- Resolved 200+ **Salesforce-DB2 data discrepancies** using SOQL and Snowflake-based anomaly detection, reducing investigation time by 40% through structured debugging and data-driven root cause analysis

DRONGO AI (Early-Stage AI Startup) | Bangalore, India

Machine Learning Intern | *Medical AI & Real-Time ML Systems*

Jan 2022 – Jun 2022

- Trained **medical AI models** using UNet and PraNet on dental radiographs for osteoporosis detection and caries segmentation in collaboration with dental specialists, achieving a 10% Dice coefficient improvement through CUDA-optimized PyTorch training pipelines
- Deployed **inference pipelines** using Docker and AWS EC2, optimizing CUDA-based GPU training to reduce compute time and improve inference throughput for large-scale medical image datasets

PROJECT EXPERIENCE

ReconAI – Production AI Automation Pipeline for Integration Failure Diagnosis

Mar 2026 – May 2026

- Architected a **continuously learning AI pipeline** using LangGraph with tool orchestration across 6 external systems, per-incident audit trail logging, and RCA caching via pgvector, achieving 70% diagnostic accuracy at \$0.006/incident on a 50-incident benchmark
- Owned the **full production platform** from first commit to deployment: FastAPI, React 18, TypeScript, Supabase PostgreSQL, SSE streaming, replacing 3-hour manual workflows with automated root cause analysis in under 15 seconds, live at recon-ai-iota.vercel.app

Swagath Central – Theatre Operations Management Platform (Freelance)

Feb 2026 – Present

- Converted a paper-based revenue workflow into a **production operations pipeline** using Claude Code as the primary development tool, with automated reconciliation, anomaly detection for revenue discrepancies, and per-show audit trails, active in client production
- Designed a **continuously improving catering intelligence layer** feeding historical show data forward into operational decisions, reducing catering wastage by an estimated ₹50,000 in the first three months of production use

TECHNICAL SKILLS

Programming & Languages: Python (Advanced); JavaScript/Node.js; Next.js; TypeScript; Java; Apex; SOQL; SQL; OOP; RESTful APIs

Salesforce: Salesforce FSI Cloud; Apex; LWC; Visualforce; Platform Events; Flow; Salesforce REST/SOAP APIs; SOQL; Copado; Salesforce DX

AI & Pipelines: LLMs & Generative AI; Agentic AI; LangGraph; RAG; FAISS; pgvector; Claude API; OpenAI API; Claude Code; Prompt Engineering; LLMops; Eval Pipelines; Feedback Loops; Observability; Medical AI; Fine-Tuning; PyTorch; HuggingFace

Stack: FastAPI; Docker; Kubernetes; AWS (EC2, S3); PostgreSQL; Redis; Celery; CI/CD (GitHub Actions); Git; Supabase; SSE Streaming

EDUCATION

University of Illinois Urbana – Champaign, Champaign, Illinois

Aug 2024 - May 2026

Master of Science Information Management, **GPA 3.86/4.00**

PES University, Bangalore, India

Aug 2018 - May 2022

Bachelor of Technology Electronics and Communications Engineering, **GPA 7.72/10.00**
